

ExitSentry

Automated Monitoring for Airport Terminal Exit Lanes

The industry-leading exit lane breach control solution for airports.

ExitSentry® is the industry-leading monitoring system that automatically monitors people and object flow through airport exit lanes. This TSA-accepted, patented solution has logged over two million hours of proven performance in more than 50 airports throughout North America. ExitSentry's advanced video analytics technology immediately identifies an individual attempting to enter an airport exit lane from the wrong direction. Using both audible and visual alarms, it alerts security personnel and then digitally records the incident for instant playback. ExitSentry maximizes exit lane security and enables security personnel to more efficiently and effectively handle other responsibilities during peak traffic time, generating a positive return on investment in a short time.

Maximum Performance for Your Investment

- Automatically detects wrong-way motion of people and objects using patented, field-configurable advanced video analytics software
- Complies with rigorous TSA performance standards

More Productive, Preemptive Security Forces

- Provides early warning detection and event instant replay
- Digitally records and stores alarm video with time and date stamp

Simple and Intuitive Operation

- Allows for user training in under 15 minutes
- Includes user-defined pre-alarm warning zone, multi-media event logging and documentation

Easy Installation, Integration and Expansion

- Interfaces to other systems and functions for remote alarm notification, intrusion containment, authorized remote bypass, or other functions
- Utilizes off-the-shelf components
- Accommodates variable exit lane widths and multi-lane configurations
